

CONTROL PANELS FOR HAZARDOUS LOCATIONS

Presented by

Fritz M. Klode
THE KLODE COMPANY

Tim Thorn
ABSOLUTE AUTOMATION
SYSTEMS, INC.

Safety is everyone's business

AASI is experiencing increasing requests for electrical control panels for use in areas where gases, vapors, liquids, dusts or fibers create a hazard for fire or explosion.

If you specify, design, make or sell machinery or equipment that operates in these environments, this presentation is for you.

You'll receive:

- an updated overview of classifications for hazardous operating environments, both domestic and international.
- valuable reference material and literature on UL classifications and ATEX codes.
- various methods to protect electrical equipment in explosive atmospheres...with cost-effectiveness in mind.
- a clear understanding of the responsibilities of the panel builder, OEM and end-user.

Safety starts and ends with each one of us. Please join us for a tasty box lunch, and a very important presentation. We look forward to seeing you!

THURSDAY, DECEMBER 11, 2008

Place: **Absolute Automation Systems, Inc.**

N56 W24842 N. Corporate Circle • Sussex WI 53089

11:30 a.m. Networking & Registration
